

Gloss Bi-Levels

High Gloss films are extremely sensitive and can be difficult to work with. Although we strive for a completely clear surface, it is almost impossible with high gloss thermofoil. JB Cutting has established bi-levels that customers need to be aware of when ordering high gloss.

JB Cutting uses the following criteria when dealing with High Gloss:

1. No bumps over 1/8" x 1/8" in diameter.
2. No more than 3 bumps/spots per 24" x 24" section.
3. No bumps in a cluster (4" apart or less).

Parts that fall into the above criteria will be remade however any other parts will be passed as acceptable.
